Published
April 2009

- With the world at our fingertips, thanks to commercial air travel, the colour television and the computer, global access and communication play an increasingly important role in design
- From the first compact disc to the laptop computer, digital design opens up a conscious investigation of even newer and more unusual materials, technologies and inspirations
- These design products have changed the way we communicate, the way we travel and the way we make ourselves at home in the 21st century
- Includes all the key designs by the people who re-invented established products and set new standards in style and quality, including Philippe Starck, Ron Arad, Konstantin Grcic, Marc Newson and Jonathan Ive
- Full information is supplied on each of the products, the design process and their manufacturers
- Illustrated with photographs of both the finished product as well as the groundbreaking technology that created them
